

The Front End Web Application Developer works with the IT and Operations departments to develop long-term technology driven solutions for MagNet. This individual will be responsible for the enhancement and management of MagNet's operational administration toolset. They will also work to advance the functionality and value of the MagNet BI Solution, Reporting Platform, and analytical data toolset. Working independently and under minimal supervision, this person will analyze business requirements, transforming those requirements into optimal systems implementations as well as actively working on multiple projects at all stages of the development lifecycle. The main focus for this position is UI development, but will require working knowledge of general database programming as well.

Contact jobs@magnetdata.net for more information or to submit a résumé for consideration.
